## BETA-CARROT-INS

### 1. Improves vision

Carrots are rich in beta-carotene, which is converted into vitamin A in the liver. Vitamin A is transformed in the retina, to rhodopsin, a purple pigment necessary for night vision.

### 2. Helps prevent cancer

Falcarinol is a natural pesticide produced by the carrot that protects its roots from fungal diseases. Carrots are one of the only common sources of this compound. A study showed 1/3 lower cancer risk by carrot-eating mice.

### 3. Slows down aging

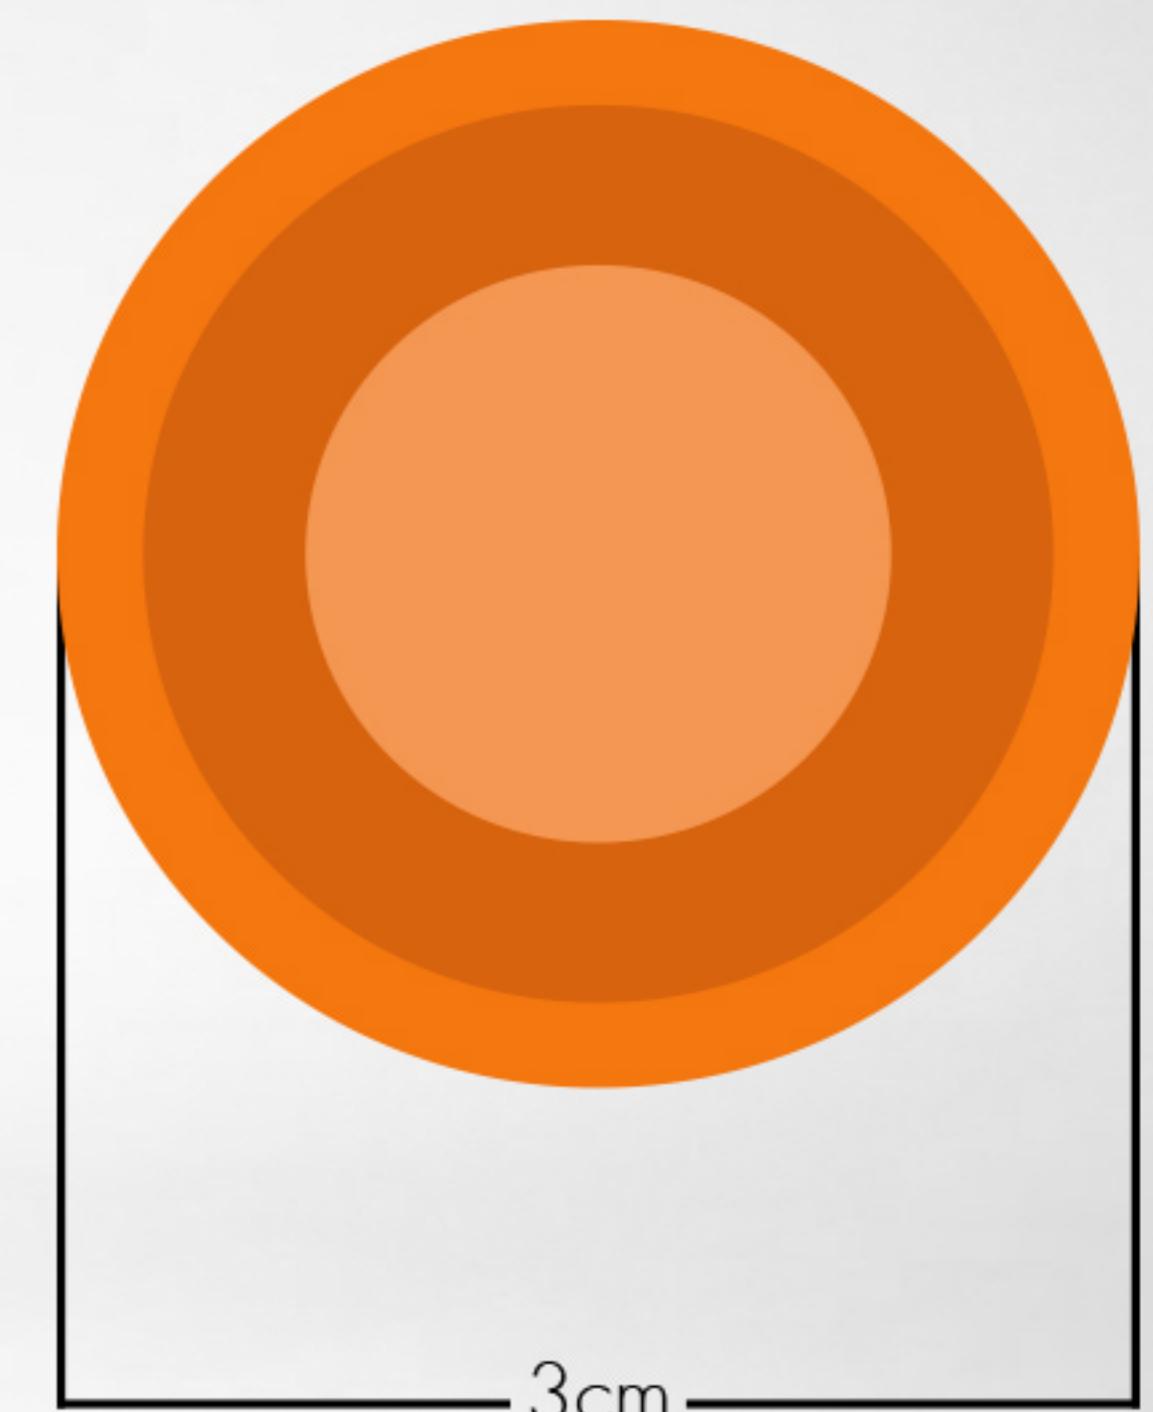

The high level of beta-carotene acts as an antioxidant to cell damage done to the body through regular metabolism. It helps slows down the aging of cells.

### 4. Promotes healthier skin

Vitamin A and antioxidants protect the skin from sun damage. Deficiencies of vitamin A cause dryness to the skin, hair and nails. Vitamin A prevents premature wrinkling, acne, dry skin, pigmentation, blemishes, and uneven skin tone.

### 5. Helps prevent infection

Carrots are known by herbalists to prevent infection. They can be used on cuts – shredded raw or boiled and mashed.
